# Seed quality spotlight

Choosing the right cultivars is like using the right bull genetics, or buying a ram. You need performance, not failure.

Recently there's been a lot more 'cheap' seed about, which often turns into an expensive disappointment.

We take great pride in the testing and care behind every bag of seed we supply - so you can sow it with confidence. This is our whole business.

## Verified

Performance proven in the National Forage Variety Trials. Fact: 3 of the top 4 perennial ryegrasses are ours!

## Protected

Our seed stewardship is second to none, with a network of humidity controlled warehouses ensuring endophyte levels are maintained.

## Certified

Independently tested byASUREQuality to be pure, high quality and free of problem weeds.

## Supported

We back up all we do, providing advice and support if things go wrong.

# Perennial favourites *All farms*

Nothing says home grown feed like perennial ryegrass. But not all perennials are equal. You need pastures you can trust to earn their keep, and then some.

## ARRAY

### PERENNIAL RYEGRASS

Tall, leafy and densely tillered, Array is super easy to eat and remains unbeaten for total yield in industry testing. Buffer yourself with great cool season growth; utilise soil nitrogen more efficiently, and give the tractor a rest; it's very persistent. Available with NEA2 or Low endophyte.

## MAXSYN

### PERENNIAL RYEGRASS

Persistent, tough and prolific, Maxsyn is the go-to for growing more feed on every hectare, year round, especially in summer and autumn, when it really shines. Plus it has plenty of tillers for adaptability. Available with NEA12, NEA4 or Low endophyte

## GOVERNOR

### PERENNIAL RYEGRASS

An outstanding survivor, Governor is always there for leafy, green grazing when you need it in early spring and autumn, whether it's for calving, lambing, flushing ewes for mating or keeping cows milking well. Available with AR37, AR1 or Low endophyte.

*Happy girls feasting on a Maxsyn/Redefine pasture.*

## 4FRONT

### PERENNIAL RYEGRASS

The tetraploid that's good for the environment, and your animals too. *4front* is so tasty and easy to manage, you can let it grow a bit longer and animals will still scoff it up and thrive, producing more off your existing land, for the same amount of nitrogen. Available with *NEA2* or *Low* endophyte.

### *Red meat specialist*

---

## ROHAN SPR

### SPREADING PERENNIAL RYEGRASS

Covering the ground like nothing else, low maintenance *Rohan* protects your hill country with fine, dense pasture and keeps animals happy with palatable, persistent easy-care feed all year long. Available with *NEA2* or *Low* endophyte.

## TYSON

### PERENNIAL RYEGRASS

Add 35% more feed to the menu for hard-working mums during lambing and calving, and watch young animals prosper, without taking it all off mum's back. Especially good for weaning lambs onto the truck. Available with *NEA4* or *Low* endophyte.

# Hybrid vigour

Need phenomenal pasture for 2-5 years? Hybrid ryegrass is the answer - extra cool season growth and tetraploid feed quality.

## All farms

### FORGE

#### HYBRID RYEGRASS

Succulent, super-abundant and lighter on the environment, this high-yielding 3-5 year tetraploid will turn your neighbours green with envy, and help get the best out of your animals all year, even in winter. Available with *NEA* endophyte.

### SHOGUN

#### HYBRID RYEGRASS

The original rockstar tetraploid hybrid for 1-3 year pastures. Available in original form and now supercharged with *NEA12* endophyte and even more yield. Fast, delicious, nutritious and guaranteed to make animals happy. Available with *NEA12*, *NEA* and *Low* endophyte.

# Quick fix

Short-term pasture doesn't have to mean sacrificing production. Even 1-2 years of great growth helps fortify your feed budget.

## All farms

### TABU<sup>+</sup>

ITALIAN RYEGRASS

Sow and stand back; you'll be grazing this sooner than virtually anything else. The record breaking Italian animals love, *Tabu+* flourishes in cool weather, so that's at least some of your winter feed sorted. A superb performer for 1-2 years.

### HOGAN

ANNUAL RYEGRASS

Another super-fast starter, this classic large leaved, tetraploid annual tops industry-rated yield comparisons over 8-12 months so you can maximise productivity and efficiency.

# What else?

*If ryegrass doesn't suit your conditions, other species will.*

## REDEFINE

COCKSFOOT

Get legendary persistence without the clumpy, aggressive behaviour and clover suppression of older varieties.

## BARENO

BROME

Persistent and palatable, so you can grow leafy, green, legume-friendly feed where ryegrass struggles on summer dry, free draining soils.

## MORROW

RED CLOVER

Energy-rich, happy in the sun and tap-rooted for summer resilience, *Morrow* tempts even the fussiest of eaters, and you can graze it more often.

## CAPTAIN

COOL SEASON PLANTAIN

Meet the cool season plantain bred for more winter feed when you need it most. Drought tolerant, with plenty of summer growth too, *Captain* also has properties to reduce nitrogen leaching.

# Great whites

*Never under-estimate the nutritional and environmental power of high performance white clover.*

## All farms

### RURU

WHITE CLOVER

Give your animals more energy and protein in summer and fix more nitrogen with this new medium leaved white clover bred for higher yield year-round. Grows so well it's almost a weed.

## Dairy

### KOTUKU

WHITE CLOVER

The large leaved white clover that thrives in summer, nourishing cows when ryegrass is not always as its best. Yields very well and establishes fast, so it's also ideal for oversowing. Mix 50:50 with *Ruru*.

## Red meat

### APEX

WHITE CLOVER

Don't miss out on white clover's benefits just because you have harder country! *Apex* spreads across the ground for persistence and improved tolerance of hard grazing, summer dry conditions and clover root weevil. Mix 50:50 with *Ruru*.

# Next winter

*Growing proven top performers is just as valuable in winter as any other time of the year.*

## ROBBOS

### FODDER BEET

Dish up a better-balanced fodder beet, combining more protein-rich leaves with high dry matter yield.

## INVITATION

### SWEDE

Late-maturing, yellow-fleshed swede, with high bulb keeping ability and leaf retention so you'll still have plenty of quality food for animals in late winter.

Catch-crop+

# Catching on

*Sow fast growing species to cover bare ground, protect soil quality and soak up soil nitrogen and other nutrients after forage crops have been grazed.*

## CATCH-CROP+

Prevent nitrogen leaching and grow more feed with better quality than oats alone using this dual species mix. *Tabu+* Italian ryegrass and *Hattrick* oats give the best of both worlds – a multi-graze catch-crop, followed by a 12-18 month pasture.
